Teaching Remotely using the ClickView Platform

Victorian Advisor Kerry has been kind enough to create a feature channel dedicated to teaching remotely using the ClickView Platform, with a bunch of great ideas and tutorials for you and your teachers.

https://clickview.tv/teachingremotelywithcv

Here are some other ways ClickView can help support your students' learning needs remotely.

1. **Use ClickView Content.**

All of the videos that are produced by Clickview come with excellent resources such as lesson plans, comprehension questions and activities for students. Additionally many other videos also have interactive resources that have been created by other teachers that you can automatically use.

1. **Create Content**

You can use your smartphone or computer to record messages, lessons, tutorials, exercises – you name it – to upload to your Workspace and share with your students. You can even add a layer of questions and annotations using the interactive tool.

A simple tutorial can be found here https://clickv.ie/w/K9_1

1. **Create interactive videos with quiz and short answer responses.**

Any video on ClickView can be turned into an interactive video. You can set a wide range of different question types that will auto mark as well as short answer responses. When the students watch the interactive video it will automatically pause and they will need to answer the question before they can go on. For a super simple video on how to create an interactive video watch this quick tutorial https://clickv.ie/w/29_1 Analytics are available when students have completed watching the video including how long they spent watching the video and whether or not they skipped to just the questions.
